Overall Process Optimization by Integration

Customers

Suppliers

Administration Level

Production Level

Administration

Clear, aggregated and detailed views provide the necessary overview to keep management comprehensively informed about all procedures and their states anytime. On this basis, individual analyses can be followed up in MS Excel.

Procurement

The sales force can easily create individual offers via PDF, MS Word or Visio on the basis of templates. At the same time, all data is also available to production and the planning manager.

Sales

Workflow Server

Procurement

With the help of predefined forms for suppliers, standardized and comparable offers are available for the purchasing department directly in the system - and after the order process automatically for the production department as well.

Sales

Scheduling

The Workflow engine coordinates, supports and supervises all jobs in production, ensuring that the planning manager need only worry about detailed planning and conflict resolution for the efficient utilization of resources. So no detail will be forgotten and no deadline will be missed.

Co-workers

For customers it is important to be informed about the production progress at all times, ensuring that possible problems can be recognized and be eliminated as early as possible and that missing information can be submitted as fast as possible.

Co-workers, Freelancers, Machines

Co-workers

In order to improve the production process regarding quality and turn-around time, suppliers can be involved in the process directly or by e-mail. Relevant data is thus at the full disposal of all parties involved, automatically and promptly.
